

# R3DUCING CARBON EMISSION

## R3 is carbon neutral

### Our stated aim

We have fulfilled our ambition to become the UK's leading voluntary carbon **neutral** Destination Services Provider.

## What are we doing about it?

### STEP 1 CALCULATE

We have teamed up with an experienced and qualified organisation to calculate R3's direct and indirect emission footprint according to international recognised standards.

### STEP 2 OFFSET

R3 is actively supporting certified carbon-offsetting projects around the world (**see below**) to reverse our total carbon emissions when delivering local destination services.

### STEP 3 CERTIFY

R3 is proud to have now received its carbon neutral certification reaffirming its commitment to contribute to projects that provide lasting social and economic benefits.

### Marco Previero

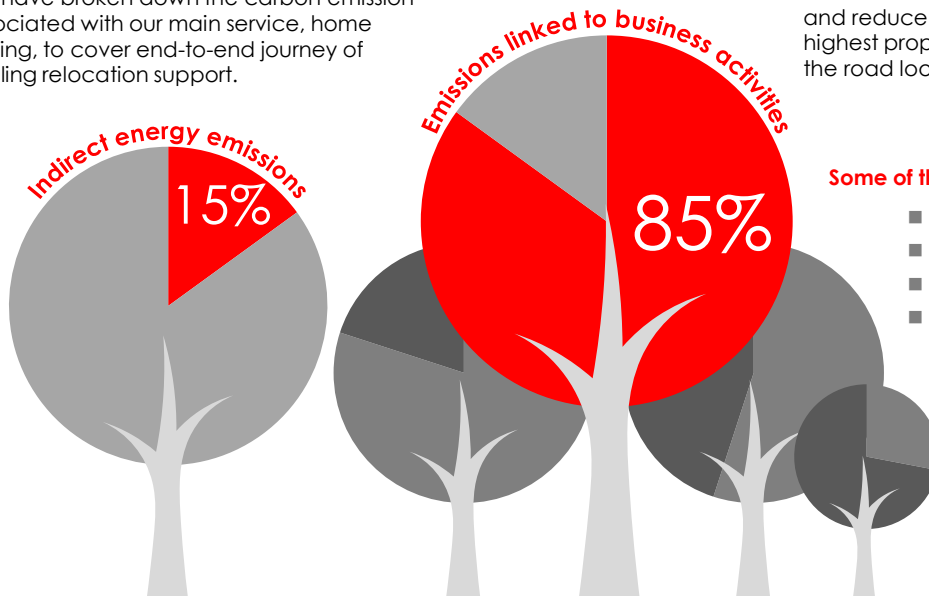

Director and Research Lead at R3

"One of our main ambitions, following the onset of the pandemic, was to provide comfort to our clients and their employees that using our services was not going to impact the environment. We are very proud to have been able to calculate and balance out our emissions to become the first Carbon Neutral DSP in London."

## Performance breakdown

We have broken down the carbon emission associated with our main service, home finding, to cover end-to-end journey of fulfilling relocation support.

R3Location direct and indirect carbon emission footprint

## 2021 and beyond

Over the next 24 months we will work to try and reduce emissions associated with our highest proportion of total emissions: days on the road looking at properties.

### Some of the projects we have invested in:

- Hydroelectric power in Brazil
- Wind power in the Philippines
- Cook stoves in Kenya
- Hydroelectric power in Fiji
